

36' Truss-Rod Frame Double Sheathed Boxcars

for Train Simulator 2013 by Golden Age of Railroading

A model of a late 19th / early 20th century double sheathed boxcar with truss-rod frame, running on archbar trucks. While the model is of a generic / freelanced type, it has been built with great attention to prototypical detailing and is based on prototypical data of similar cars.

The model comes painted in three GN paint schemes. You can also download a pack of generic, unlettered versions of the same model or a repaint kit and create your own textures for this model.

Credits: For the production of this add-on, I have used source materials from:

- Rick Grout, GTraxSims.com (sound files)
- MediaCollege.com (sound files)
- CGTextures.com (image files)

System Requirements and Installation:

System Requirements: Train Simulator 2013 must be installed, there are no special hard- or software requirements which would exceed those of the game itself.

Installation:

1. Download the .RWP file and save it in a secure place on your hard disk – just in case you might have to reinstall it at a later time.
2. Launch [RailWorks](#) and select the [Package Manager](#) on the Welcome Screen.
3. Click the [Install](#) button, browse to the file from step one, click [Open](#). The package will be installed now, after which you can already use the new assets in the game!
4. To be able to place the cars in a route, you will first have to enable the [object filter](#) (left-hand middle flyout window, the button that shows a blue cube with an orange triangle) for developer "[GreatNortherner](#)", product "[SteamEra](#)". Also switch on developer "[Kuju](#)", product "[RailSimulatorUS](#)".
5. You will now find the cars in the assets browser, listed as "[Boxcar 36ft gen 1-4](#)"
6. All cars will be empty right after placing them in the scenario editor. To load a car, double click on it. When it is highlighted in dark red, tick the little 'cargo' checkbox in the right flyout window. You can also do this for entire consists in one go, all you need to do is to switch on the 'consist select' radio button in the lower left flyout window.

Copyright, Repaints, Distribution, Warranty:

All of the contents of this software are [copyrighted material](#). You may use and include them in route uploads as long as they are free of charge. You may not redistribute the entire software package itself (in other words: the .rwp file).

You can do repaints of the included models and you are allowed to distribute them as long as it is free of charge. You do not have to ask for permission to do a repaint of

these freeware models, however I would appreciate a short notice just so I know who is working on what, if only to prevent potential parallel projects.

If you wish to include the objects in a payware project of yours, please contact me first.

This software is provided to you on an "as is" basis without any express or implied [warranty](#) of any kind.
