

IIR BN Chemical Plant Freestyle Switching Scenario

A very challenging BN themed switching scenario for the Industrial Interactive Route (TS2012 version). The scenario is set up as a "freestyle switching" scenario, in which you are given your work order/switch list ('marshall' instructions) at the beginning. How and in what order to complete the tasks is up to you.

This scenario uses two payware packs and the RailSimulatorUS content. A tutorial on how to swap rolling stock with the help of RW Tools is included.

Please note: due to a bug with some stuck red signals on this route, you will have to disable "Exit on SPAD" in the gameplay options and then just run past those red signals. There are no AI trains in this scenario.

By Michael Stephan

Add-ons needed to run this scenario:

Read this if you do not want to download (or buy!) and install quite so many files: With the help of Mike Simpson's (donationware) RW_Tools suite of utilities you can quite easily substitute any piece of equipment used in this or any other scenario. Please read on here for more information about RW_Tools: www.rstools.info
