Scenario Description

You are in charge of the morning passenger round trip on the MC&SA route. Assemble your train in Camden yard, head to Moscow, wye your train, return to Camden. Store your coaches and return your engines to the roundhouse.

PLEASE NOTE: The engine used in this scenario is a very old model and may have some physics issues. Particularly the brakes may not work as intended, when running this train I got the feeling that applying the train brake did not actually affect any of the cars in tow. A simple workaround however is to set one or two of your cars' handbrakes on the F4 HUD if you need to come of to complete stop or are going down one of the MC&SA's heavy grades.

Duration: 60 minutes
Difficulty: moderate
              passenger train
              some switching moves

Installation and System Requirements

System Requirements: Train Simulator 2015 must be installed. Backwards compatibility to older versions of Railworks/Train Simulator cannot be guaranteed.

Installation:
1. Download the RWP file and save it in a secure place on your hard disk.
2. Now install the RWP file with Train Simulator's Package Manager. To access that tool, launch utilities.exe in the main Train Simulator installation folder.
3. Note: You can find utilities.exe by right clicking on the Train Simulator 2015 title in your Steam Library, selecting Properties, and then clicking the "Browse Local Content" button on the "Local Files" tab.
4. Once the Utilities are running, go to the Package Manager Tab, click the Install button, browse to the file from step one, click Open. The package will be installed now, after which you can already run the scenario in the game!
5. You'll find the scenario listed in the Standard Scenarios Tab for the selected route.

Rolling Stock Requirements: The add-ons and DLC packs listed below are needed to play this scenario.

Read this if you do not want to download or buy quite so many files: With the help of Mike Simpson's (donationware) RW_Tools suite of utilities you can quite easily substitute any piece of equipment used in this or any other scenario. Please read on here for more information about RW_Tools: www.rstools.info
