

Marias Pass 1960 Essex Pit Local Freight Scenario

[Updated and bugfixed for TS2014.] Service the gravel pit near Essex: take empty hoppers to Essex, return with loaded cars. Your train has low priority and just enough power to get the 40 cars up and down the pass, so prepare for a long run. On the run to Essex you'll be following two other trains up the pass while dispatch has to navigate two westbounds past your queue of three eastbounds. On the return run things should be a bit better, you'll be the only westbound against a procession of eastbounds.

The scenario has been split in two parts, both combined will take about four hours to complete. Quite difficult due to the weight of your train and the many superior AI services.

This scenario features a lot of AI trains with authentic looking consists and thus requires a LOT of free- and payware add-ons. Please make use of RW_Tools' ability to swap rolling stock if you don't have or want to use some of the add-ons and DLC used by this scenario. I have provided an illustrated tutorial on how to swap rolling stock with RW_Tools on my website.

By Michael Stephan

Add-ons needed to run this scenario:

[Tutorial on How to Swap Rolling Stock with RW_Tools](#)

For those of you who do not want to run a scenario with all the rolling stock that I have added to the scenario, [Mike Simpson's RW_Tools](#) offers you a great and simple way of replacing any unwanted piece of equipment. That way, you can substitute any missing piece of payware equipment, move the scenario to a different time frame, run a Dash-9 instead of a GP9 ... the choice is all yours! Please see this PDF for a detailed how-to guide: [Tutorial_RW-Tools_Swap.pdf](#)
