

Marias Pass 1968 Empire Builder WB Scenario

Take the westbound Empire Builder from Shelby to Whitefish. This scenario is set in GN's "Big Sky Blue" era, based on a 1966 timetable. Back then the Builder did only one stop between the two crew change points at Shelby and Whitefish, at Cut Bank, all other stations were only served by GN's secondary transcontinental, the Western Star.

Unlike many other US railroads in the late 60s, the GN still invested in their flagship passenger trains, so your schedule is very tight, your train is long and heavy and has highest priority.

This scenario features a lot of AI trains with authentic looking consists and thus requires a LOT of free- and payware add-ons. Please make use of RW_Tools' ability to swap rolling stock if you don't have or want to use some of the add-ons and DLC used by this scenario. I have provided an illustrated tutorial on how to swap rolling stock with RW_Tools.

Tutorial on How to Swap Rolling Stock with RW_Tools

For those of you who do not want to run a scenario with all the rolling stock that I have added to the scenario, [Mike Simpson's RW_Tools](#) offers you a great and simple way of replacing any unwanted piece of equipment. That way, you can substitute any missing piece of payware equipment, move the scenario to a different time frame, run a Dash-9 instead of a GP9 ... the choice is all yours! Please see this PDF for a detailed how-to guide: [Tutorial_RW-Tools_Swap.pdf](#)
